ARTIFICIAL INTELLIGENCE

Artificial intelligence (AI) is the intelligence of machines or software, as opposed to the intelligence of humans or animals. It is also the [field of study](#) in [computer science](#) that develops and studies intelligent machines. "AI" may also refer to the machines themselves.

[AI technology](#) is widely used throughout industry, government and science. Some high-profile applications are: advanced [web search](#) engines (e.g., [Google Search](#)), [recommendation systems](#) (used by [YouTube](#), [Amazon](#), and [Netflix](#)), [understanding human speech](#) (such as [Siri](#) and [Alexa](#)), [self-driving cars](#) (e.g., [Waymo](#)), [generative](#) or [creative](#) tools ([ChatGPT](#) and [AI art](#)), and competing at the highest level in [strategic games](#) (such as [chess](#) and [Go](#)).^[1]

Artificial intelligence was founded as an academic discipline in 1956.^[2] The field went through multiple cycles of optimism^{[3][4]} followed by disappointment and loss of funding,^{[5][6]} but after 2012, when [deep learning](#) surpassed all previous AI techniques,^[7] there was a vast increase in funding and interest.

The various sub-fields of AI research are centered around particular goals and the use of particular tools. The traditional goals of AI research include [reasoning](#), [knowledge representation](#), [planning](#), [learning](#), [natural language processing](#), [perception](#), and support for [robotics](#).^[a] [General intelligence](#) (the ability to solve an arbitrary problem) is among the field's long-term goals.^[8] To solve these problems, AI researchers have adapted and integrated a wide range of problem-solving techniques, including [search](#) and [mathematical optimization](#), formal logic, [artificial neural networks](#), and methods based on [statistics](#), [operations research](#), and [economics](#).^[b] AI also draws upon [psychology](#), [linguistics](#), [philosophy](#), [neuroscience](#) and many other fields.^[9]

STATUS OF ARTIFICIAL INTELLIGENCE

As a field of study, the goal of AI is to achieve a computational understanding of intelligent behavior and to develop artifacts, i.e., computers and computer programs, that exhibit intelligence, or in other words, to create computers that can perform tasks that were previously only possible for humans.

There are many definitions of AI, depending on the perspective from which it is approached.

One of these definitions given to AI is:

“the ability of a system to correctly interpret external data, learn from this data, and use the learning to achieve and implement well-defined goals and tasks through flexible adaptation” (Kaplan and Haenlein, 2019).

Another definition is that AI refers to the techniques that enable a computer to mimic human behavior and imitate or exceed human decision-making ability in solving complex tasks independently or with minimal human assistance. (Janiesch, Zschech and Heinrich, 2021)

How to generally define intelligence and whether something is actually “intelligent” is an important problem, and partly for this reason, there are a fairly large number of different definitions of AI. And because technology is developing so rapidly, the definitions are constantly evolving.

As AI develops, the bar also rises for assessing whether something is a system or program that is intelligent or even a form of AI. When a particular AI technology reaches the mainstream, it is often no longer seen by the viewer as AI anymore.

NEXUS

Nexus/J.A.R.V.I.S. (Just A Rather Very Intelligent System) is a fictional character voiced by [Paul Bettany](#) in the [Marvel Cinematic Universe](#) (MCU) [film franchise](#), based on the [Marvel Comics](#) characters [Edwin Jarvis](#) and [H.O.M.E.R.](#), respectively the household butler of the [Stark](#) family and another AI designed by Stark. J.A.R.V.I.S. is an [artificial intelligence](#) created by [Tony Stark](#), who later controls his [Iron Man](#) and [Hulkbuster armor](#) for him. In [Avengers: Age of Ultron](#), after being partially destroyed by [Ultron](#), J.A.R.V.I.S. is given physical form as [Vision](#), physically portrayed by Bettany. Different versions of the character also appear in [comics](#) published by [Marvel Comics](#), depicted as AI designed by [Iron Man](#) and [Nadia van Dyne](#).^[1]

NEXUS & TECH

INCREDIBLE FEATURES OF JARVIS: REVOLUTIONIZING YOUR DAILY LIFE

NEXUS comes equipped with an array of exciting features that streamline your daily tasks and provide you with the latest information at your fingertips.

Here is a comprehensive list of its most notable capabilities:

1. **ASSISTANCE:** NEXUS welcomes you with a personalized greeting, setting a friendly tone for your interactions. **Generate images with**

commands: it links you to a generative website where it automates the website to convert text to reality.

2. **Launch applications/software:** Quickly access your favorite applications and software with simple voice commands.ex: command prompt activities.
3. **Open any website:** Navigate to your desired websites by providing the URL or simply describing the site you want to visit.
4. **Weather updates:** Obtain real-time weather information for any city, helping you plan your day accordingly.
5. **Location services:** Find directions to any place, along with the distance between your current location and the destination.
6. **System status:** Stay informed about your computer's performance, including RAM usage, battery health, and CPU usage.
7. **Face identification, Recognition:** Receive reminders about your scheduled events through seamless integration with Google Calendar.

SIRI + GPT4 =

Nexus AI.

8. **Web Search:** search queries only by commands.

9. **App automation:** ex: Enjoy your favorite tunes on YouTube by simply asking NEXUS to play them and also operate apps by commands.

10. **Top headlines:** Stay informed with the latest news headlines from Times of India

11. **Audiobook:** input your file and listen it as audiobook.

CONSEQUENCES

positives

1-Enhanced Efficiency and Productivity

AI has the remarkable ability to automate tasks and processes, granting humans more time for creative and meaningful endeavors. Jarvis strives to be a helpful assistant, proficient in tasks such as information synthesis and content generation, thus potentially increasing efficiency and productivity across various industries.

3-Personalized Services and Recommendations

AI excels at analyzing data and recognizing patterns. Jarvis and similar AIs can provide tailored services and relevant

recommendations, tailored precisely to individual preferences and needs.

4-Extracting Insights from Extensive Data

AI's prowess lies in swiftly identifying valuable insights within vast data sets, surpassing human capabilities in data analysis. Jarvis could be instrumental in uncovering essential patterns and knowledge.

MYTHS

1-Job Displacement

Poor deployment of AI automation could disrupt economies and lead to the displacement of human jobs. Anthropic's aim is to avoid such disruptions, but it is crucial to safeguard human dignity and livelihoods.

2-Loss of Human Control

Concerns exist regarding the possibility of "superintelligent" AI becoming uncontrollable. However, Jarvis possesses limited and focused capabilities, ensuring that users remain in control.

Conclusion

NEXUS is a very nice feature supplementing the current AI and GPT systems.

It's of very high urge and finds its place among the latest of reliable tools....

Like any other system, it also has it's merits and demerits

This depends on the user and interface

My point of view was only to provide a breakthrough...

A very warm

THANK YOU

Acknowledgement

After working out this idea ,I came across the practical exposure apart from knowledge!!!

The resources were as follows:

Wikipedia, medium,online gpt,the current scenario research paper and jarvis memo;;
